

Webcast: 3 Ways To Import Your Standard ERP Data With New flex.bi HansaWorld Application 4.0

Thursday, August 10th, 3pm EET

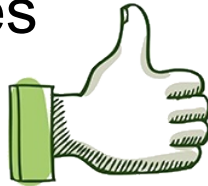

Agenda

- 3 HansaWorld application import types
- Advanced import options for each import type
- HansaWorld consolidation
- Resolutions for common import errors

Import Types: REST API

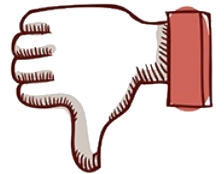

Pros:

- instant refresh capabilities
- does not require a HAL package
- does not slow down the HansaWorld server
- does not need to save files on flex.bi servers

Cons:

- cannot handle large daily data amounts
- requires the WebShop module
- available only from HansaWorld 8.1

Recommended for customers with small daily data amounts.

Import Types: Source files only

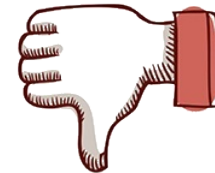

Pros:

- can handle massive data amounts
- doesn't require the WebShop module
- can be used with older HansaWorld versions

Cons:

- requires a HAL package for automatic exports
- data cannot be instantly refreshed
- slows down HansaWorld while data export
- export times have to be pre-planned
- need to be saved on flex.bi servers, consuming your reserved space

Recommended for customers with large daily data amounts.

Import Types: REST API + Source files

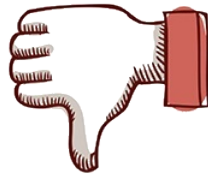

Pros:

- combines the pros of both Rest API & Source file imports
- can handle small daily data amounts through Rest API and large historical data files
- can upload registers which cannot be supported through Rest API

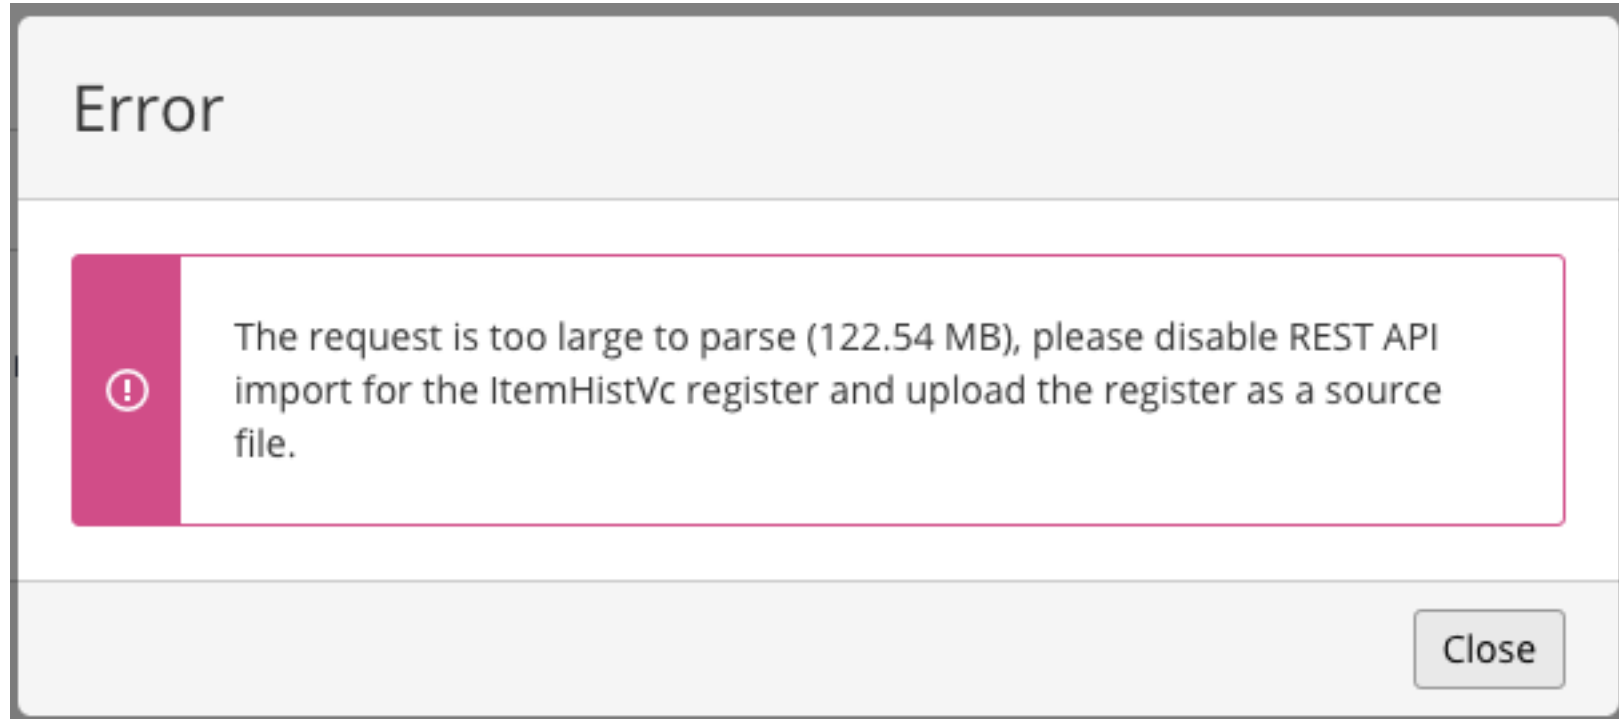

Cons:

- combines the cons of both Rest API & Source file imports

Recommended for customers with small daily data amounts, but a vast amount of historical data.

Common issues (1)

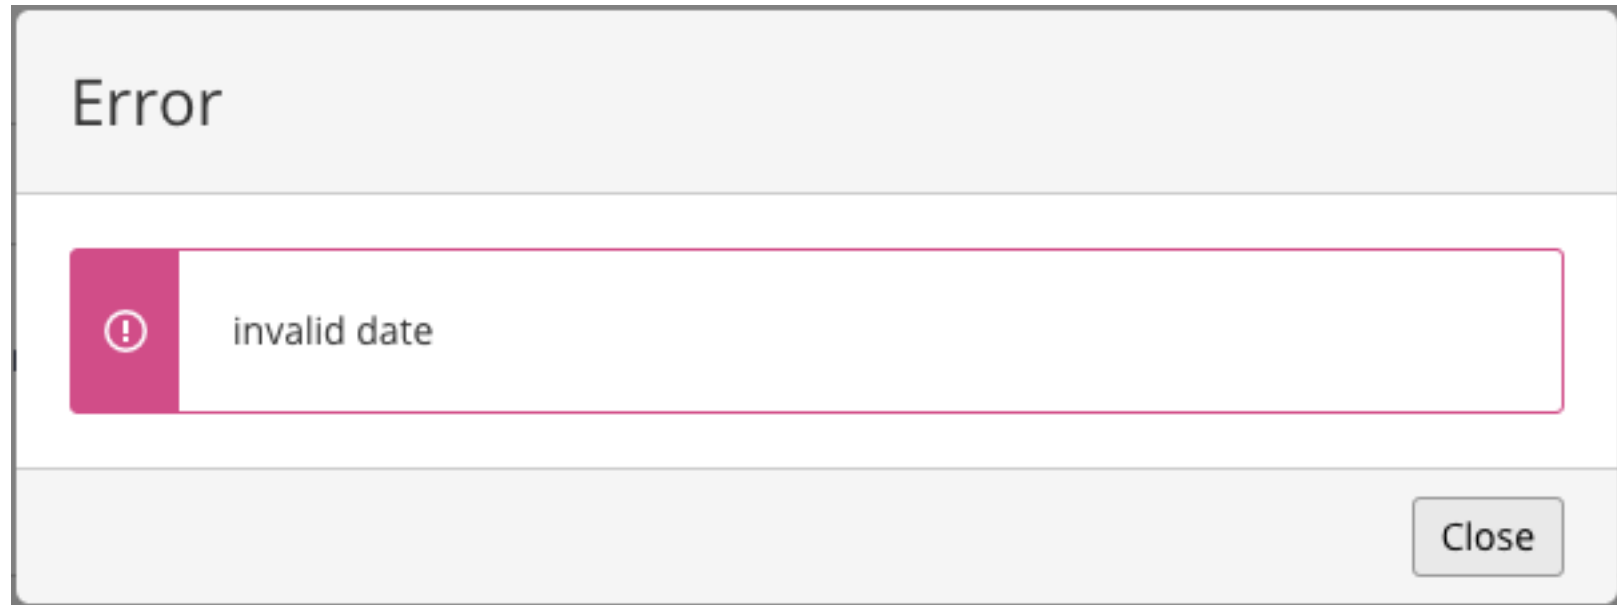

The screenshot shows a standard Windows-style error dialog box. The title bar at the top left contains the word "Error". The main content area features a pink vertical bar on the left side with a white exclamation mark icon. To the right of this bar, the error message is displayed in a sans-serif font. At the bottom right corner of the dialog box, there is a button labeled "Close".

Error

! The request is too large to parse (122.54 MB), please disable REST API import for the ItemHistVc register and upload the register as a source file.
